

# Empowering *Genuine Human* Tabletop Game Creators

Aspects of your tabletop game can be duplicated by AI, *without permission or compensation*. That's theft, plain and simple.

## **The Solution?**

Human Intelligence® delivers a secure, patent-pending system that enables you to **certifiably prove** your game was created by *you*, a real human.

So you can fight back against AI overreach, safeguard your uniquely human creativity, and retain the rights to your IP.

**We are fiercely pro-human. *Join us.***

# Benefits

## Major tabletop brands view human-made creative content as an asset.<sup>1,2</sup>

Publishers are more likely to purchase and promote your game if it's certifiably human-created. This boost can help you find more customers and reach more players, both of whom are more likely to purchase, play, and enjoy your game.

## Players value human-created games as more meaningful and trustworthy.<sup>1,3</sup>

Playing "at the table" offers a communal, social experience reflective of human concerns – an authenticity that a majority of players equate solely with human authorship.

Protect your game from AI theft. Distinguish it with the registered, licensed Humanright™ mark.

# Our Game Technology

## Reliable Authentication

Human Intelligence® tools focus on provenance; they discern tell-tale signs and attributes unique to human creative activity, enabling us to reliably identify a proprietary and protected chain of creation™. Our tools then publicly label your work as certifiably human-made.
